# Totarol

## TOTARA EXTRACT

**The Totara tree is a New Zealand's giant native eucalypt. An ancient Gondwandaland Podocarp, Totara evolved during the Jurassic age 135-195 million years ago and can live thousands of years. Its lengthy lifespan is all due to the Totarol compound found deep in the heartwood – making the wood resistant to decay.**

A potent antimicrobial and antioxidant, Totarol protects the wood from damaging oxidative stress and bacteria, and it can do the same for your skin.

Three times stronger than Vitamin E, it helps neutralise the free radicals linked to skin ageing, which is why it's used in Living Nature's certified natural Rich Day Cream and Nourishing Night Cream.

Totarol is sourced using supercritical solvent-free extraction from recycled wood.
